

#### Basic knowledge of MetaTrader 4

MetaTrader 4 is a client software developed by the Russian company MetaQuotes Software to perform foreign exchange trading (Forex). This software allows you to get market information and actually trade 24 hours a day, 7 days a week, as long as you have access to the Internet.

One of the main attractions of MetaTrader 4 is that it allows even first-time traders to easily use sophisticated charting analysis. 4 includes three basic types of charts such as bar, candlestick, and line charts, as well as about 50 technical indicators such as moving averages, RSI, and Bollinger bands. In addition to the three basic types of charts such as bar charts, candlesticks, and line charts, MetaTrader 4 provides easy access to about 50 technical indicators such as moving averages, RSI, and Bollinger bands. In addition, MetaEditor, a function to program your own technical indicators, is included.

Multiple charts can be displayed simultaneously.

The chart window can be split and displayed separately. The chart window can be divided into multiple windows, which is convenient when conducting multiple transactions.

Abundant technical indicators

More than 50 types of technical indicators such as moving averages, RSI, and Bollinger Bands are available. You can also create your own technical indicators.

Display of all currency pairs

In the quote display window, you can check the movement of all currencies in real time, and also specify the currencies to be displayed.

MQL4

MetaTrader 4 is equipped with a function to create and display its own technical indicators using a programming language called "MQL4".
